

 Jash (You) = Reviewer / Team Leader

Your job:

-  Create the repository
-  Review everyone's code
-  Merge code into dev
-  When the project is finished, merge dev into main

Your friends' job:

- Write code
- Push it to their own branch
- Create a Pull Request (PR)
- Wait for you to approve it

Repository Structure

main

↑

|

dev

↑

|

feature/harshida

feature/vishakha

feature/member4

- main → Final project (never touch directly)
- dev → Team branch
- feature/... → Personal branch for each member

For Your Friends (Contributors)

First Time Only

1. Clone the repository

git clone https://github.com/YOUR_USERNAME/trendr-ai.git

Go inside the folder:

cd trendr-ai

2. Move to the dev branch

git checkout dev

3. Create their own branch

Harshida:

git checkout -b feature/harshida

Vishakha:

git checkout -b feature/vishakha

Member 4:

git checkout -b feature/member4

This is done only once.

 Whenever They Work

Step 1

Open the project and write code.

Step 2

Save the changes.

Step 3

Check changed files

git status

Step 4

Add changes

git add .

Step 5

Commit

git commit -m "Added login page"

(Write any meaningful message.)

Step 6

Push

Harshida:

git push origin feature/harshida

Vishakha:

git push origin feature/vishakha

Step 7

Go to GitHub

Click

Compare & Pull Request

Base branch:

dev

Compare branch:

feature/harshida

Click

Create Pull Request

Done.

 What Jash Does

Someone creates a PR.

Example:

feature/harshida

↓

dev

You go to GitHub.

Click

Pull Requests

Open it.

Review the code.

If everything is fine:

Merge Pull Request

Done.

Now Harshida's code is in dev.

 When the Whole Project Is Finished

Create another Pull Request:

dev

↓

main

Review once.

Click

Merge

Done.

 Before Starting New Work (Very Important)

Every contributor should always get the latest code from dev before they start working.

Run:

```
git checkout dev
```

```
git pull origin dev
```

Then go back to their own branch:

```
git checkout feature/harshida
```

Now bring the latest dev changes into their branch:

```
git merge dev
```

Now they can continue coding.

Cheat Sheet for Contributors

First Time

```
git clone <repo-url>
cd trendr-ai
git checkout dev
git checkout -b feature/your-name
```

Every Time You Finish Work

```
git status
git add .
git commit -m "Your message"
git push origin feature/your-name
```

Then:

 Create a Pull Request from feature/your-name → dev

Cheat Sheet for Jash

Get the latest dev

```
git checkout dev
git pull origin dev
```

Review PR

On GitHub:

Pull Requests

↓

Review

↓

Merge

When the project is complete

Create a Pull Request:

dev

↓

main

Merge it.

🧠 Easy Way to Remember

👥 Friends:

Write Code

git add .

git commit

git push

Pull Request

👤 Jash:

Review

Merge to dev

Later merge dev to main

This is all you need for a beginner team.
