

Jash (Reviewer / Team Lead)

You are responsible for:

-  Creating branches
-  Reviewing code
-  Merging Pull Requests
-  Keeping main production-ready

Workflow:

feature branch

|

dev

|

(Jash reviews PR)

|

main

Commands for Contributors

Step 1: Clone the Repository (First Time Only)

```
git clone https://github.com/<YOUR_USERNAME>/trendr-ai.git
```

Go inside the project:

```
cd trendr-ai
```

Step 2: Get the Latest Code

```
git checkout dev
```

```
git pull origin dev
```

Always do this before starting work.

Step 3: Create Your Own Feature Branch

Example:

Harshida

```
git checkout -b feature/harshida-backend
```

Vishakha

```
git checkout -b feature/vishakha-frontend
```

Another teammate

```
git checkout -b feature/member-auth
```

Each person creates **their own feature branch**.

Step 4: Work on the Code

Make changes.

Step 5: Check Status

```
git status
```

Step 6: Add Files

```
git add .
```

Step 7: Commit

Example:

```
git commit -m "Add login page"
```

or

```
git commit -m "Create generate API"
```

Step 8: Push Feature Branch

Example:

```
git push origin feature/harshida-backend
```

Step 9: Create Pull Request

GitHub

feature/harshida-backend

↓

Create Pull Request

↓

Base = dev

Compare = feature/harshida-backend

Do **NOT** merge yourself.

Wait for Jash.

Daily Workflow for Contributors

Every morning:

git checkout dev

git pull origin dev

git checkout feature/your-branch

git merge dev

or

git rebase dev

Continue working.

Commands for Jash (Reviewer)

Get Latest Code

git checkout dev

git pull origin dev

Review Pull Request

On GitHub

Pull Requests

↓

Open PR

↓

Files Changed

↓

Review Code

↓

Approve

↓

Merge

Update Local Dev

After merging on GitHub:

```
git checkout dev  
git pull origin dev
```

Now your local dev has the latest code.

Merge Dev into Main

When the project is stable.

Option 1 (Recommended): GitHub

Create Pull Request

Base = main

Compare = dev

↓

Review

↓

Merge

Option 2 (Terminal)

```
git checkout main  
git pull origin main  
git merge dev  
git push origin main
```

If Someone Wants Latest Changes

```
git checkout dev  
git pull origin dev
```

If Someone Starts New Work

```
git checkout dev  
git pull origin dev  
git checkout -b feature/new-task
```

If Someone Finished Work

```
git add .  
git commit -m "Completed feature"  
git push origin feature/new-task
```

Then

Open Pull Request

feature/new-task

↓

dev

If Reviewer Approved

GitHub

↓

Merge Pull Request

↓

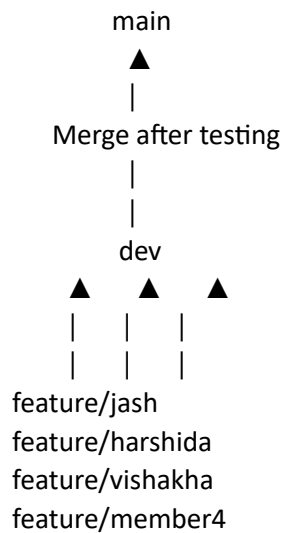

Delete Branch (optional)

If Someone Gets New Changes from Dev

```
git checkout dev  
git pull origin dev  
git checkout feature/my-branch  
git merge dev
```

Complete Workflow

GitHub

Commands Cheat Sheet

Contributors

Clone (Only First Time)

```
git clone <repository-url>
cd trendr-ai
```

Start New Task

```
git checkout dev
git pull origin dev
git checkout -b feature/your-name-task
```

Save Work

```
git add .
git commit -m "Describe your changes"
git push origin feature/your-name-task
```

Open Pull Request

feature/your-name-task → dev

Reviewer (Jash)

Get Latest Dev

```
git checkout dev
git pull origin dev
```

After Reviewing PR

Approve and merge on GitHub.

Update Local Repository

```
git checkout dev
git pull origin dev
```

Release to Main

Using GitHub (recommended):

dev → main

Or with Git:

```
git checkout main
git pull origin main
git merge dev
git push origin main
```

Team Rules

-  Never commit directly to main.
-  Don't work directly on dev.
-  Every task gets its own feature/... branch.
-  Open a Pull Request from feature/... to dev.
-  Jash reviews and merges into dev.
-  After testing, Jash merges dev into main.
-  Always run git pull origin dev before starting new work.

Following this workflow will keep your repository clean, make code reviews straightforward, and reduce merge conflicts as your team collaborates.
